

**World's Foremost Authority for  
Infrared Training and Certification**

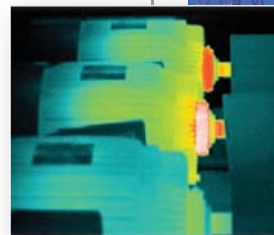

### COMPANY PROFILE

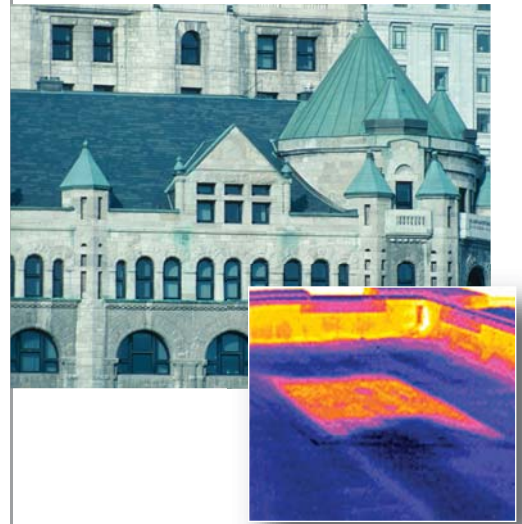

Infraspection Institute is the oldest independent infrared training and certification authority in the world. Infraspection Institute literally pioneered the infrared training industry having trained and certified nearly 10,000 thermographers worldwide. During its long history, it has shaped the infrared industry through training, technical consulting, technical publications, research, standards development, and software publishing.

Infraspection Institute's mission is to support practicing thermographers with educational, certification and support services. We are deeply committed to the global advancement of thermography as a science and a profession.

### TRAINING

Since Infraspection Institute does not manufacture or sell infrared equipment, its courses are presented without marketing hype and are relevant to all brands of thermal imagers regardless of age. All of our instructors are expert, practicing thermographers. Each brings years of unmatched, real-world experience to the classroom. Our courses are taught using a combination of dynamic multimedia presentations, hands-on demonstrations and one-on-one interaction with students. All courses integrate theory, practice, and case studies in a fun, relaxed atmosphere designed to maximize your learning experience.

### CERTIFICATION

Infraspection Institute's Certified Infrared Thermographer® program has set the standard of excellence for infrared thermographers since 1980. Recognized by the US Office of Patents and Trademarks, only Infraspection Institute is authorized to issue the Certified Infrared Thermographer® mark. It is the infrared industry's recognized symbol of excellence for training.
